

EC1340 Economics of Global Warming

Course Outline

Matthew A. Turner
Brown University
Fall 2025

Course objectives and requirements:

The problem of global warming can be described by a simple economic model. We face a trade-off between current consumption, future consumption, and future climate. We have preferences over consumption and climate and would like to choose our optimal climate/consumption bundle. This course is organized around filling in the details required to make this model useful, characterizing the optimal climate/consumption path suggested by the model, and finally, investigating policies to move us towards the optimal path.

The first part of the course will be devoted to developing an understanding of the facts that confront us. The second part of the course will be devoted to solving for the optimal climate and consumption path. The third part of the course will investigate carbon mitigation policies.

The course will require familiarity with microeconomics and basic calculus. In particular, I will assume you are familiar with the material from intermediate microeconomics and that you can solve univariate optimization problems. I will cover solution methods for more difficult problems in class. Students sometimes find the third part of the course a little more difficult, so if you are worried about the level of the course, be sure to look at the last two or three problems sets before you enroll.

Prerequisites:

The prerequisite for this course is ECO1110. If you have not taken this course, I am generally willing to waive the prerequisite for students with a technical background.

Course website:

The course website is at:

https://matthewturner.org/ec1340/ec1340_main.htm

This website is also where you will find supplementary readings, homework assignments and solutions, lecture notes, old exams and announcements. The schedule on this site provides a detailed schedule of the material to be covered during the term. You should check this schedule at least weekly for updates and changes.

Lectures:

There is a single section of this course. Lectures are in Smith-Buonanno Hall 206, MW 8:30-9:50. I will miss class on October 29 and will not hold class on November 26. I do not anticipate other deviations from the regular schedule, but if they arise, I will announce them in class and on the course website.

Subject to changes in the public health environment, my intention is to record lectures and to make them available on Canvas *only* to students who are quarantining or ill.

Required Texts:

- Storms of My Grandchildren, J. Hansen, Bloomsbury, 2009. (< 20\$)
- A Question of Balance, W. Nordhaus, Yale University Press, 2008.(< 30\$)

All three books should be available at the bookstore.

I will often refer to: The Economics of Climate Change: The Stern Review, N. Stern, Cambridge University Press 2008. An online version is available at this link:

https://matthewturner.org/ec1340/readings/Sternreview_full.pdf

Office hours:

I will have office hours regularly during the term. For a schedule and location, please check this link:

https://matthewturner.org/ec1340/office_hours.htm

You do not need to ask permission before coming to office hours or making an appointment.

I will try to maintain a regular schedule of office hours, but will occasionally need to deviate from this schedule. In this case, I will make a note at the link above. I encourage you to check before you come to my office.

By default, I will hold office hours in person. I will make arrangements for Zoom meetings if needed. Please email me after signing up for an office hour slot to arrange this.

I will also, usually, be available to talk after class.

The TA for the course is Daniele Goffi. His office hour schedule will also be available at the link above. If there is sufficient demand, we may organize a tutorial session at a time and location TBD.

Grading:

You should plan to attend class and you should expect to hand something in almost every week. There are approximately weekly problem sets, at least 4 short in class quizzes, along with a midterm and a final.

Weights assigned to each are as follows:

- Best 3 of 4 quizzes 10%
- Best 8 homework assignments 35%
- Midterm 20% (October 13, 2025, regular classroom)
- Final 35% (TBD, Finals period.)

I will collect problem sets through the course canvas site at

<https://canvas.brown.edu/courses/1100273>

Problem sets are to be handed in on Canvas by midnight of the day they are due. I will post solutions shortly after class and so will not accept late problem sets. The marking scheme allows you to miss two assignments without penalty, so expect me to enforce this rule. Quizzes will take about 5 minutes. They will be administered at the beginning of class on days to be determined. As with the homework, the marking scheme allows you to miss one without penalty, and so there will be no make-up quizzes.

Over 14 weeks, students will spend 3 hours per week in class (42 hours total). Homework, reading, and studying for midterm examinations will take approximately 9.5 hours per week (133 hours total). In addition, there is a 2-hour final exam for which approximately 18 hours of review is assumed.

You are welcome to ask chatGPT or other LLMs for help with assignments. I think it is important to learn how to use these tools, and asking them for help with assignments is a reasonable thing to do. However: (1) do not submit machine generated answers as you own; (2) be careful, chatGPT is not always very helpful and is sometimes wrong; (3) remember that you won't have these tools available for exams, so the object is to use them to help you learn the material.

Email Policy:

I will try to reply to email within 24 hours, except on weekends. For me to be able to do this, I need some rules about email correspondence:

- Please look on the website to see if you can find an answer to your question before you write.
- Try to formulate questions that require short answers. If it takes more than a few sentences to answer, then the question is too hard for email. Please come to office hours instead.
- No emails about grading. Please come to office hours for this.

Academic misconduct:

Copying or plagiarizing or other forms of academic misconduct will not be tolerated. Students caught engaging in these activities will be subject to academic discipline. The Brown University Academic code is here:

<https://www.brown.edu/academics/college/degree/sites/brown.edu/academics.college.degree/files/uploads/Academic-Code.pdf>

Students with disabilities:

Please inform me if you have a disability or other condition that might require some modification of any of these course procedures. You may speak with me after class or during office hours.
